AUTO GLU CBD

CANNABINOIDS	THCa:	RATIO	FORM
9-14%	LESS THAN .5%	30:1	SEED

AVAILABILITY

Seed

Parent Strains: Auto Alpha x Purple Thai

Cannabinoid Profile: CBD Dominant Hybrid

Potential CBD:THCa Ratio: 30:1

***Pre-Harvest CBD:** 9.35%, THCa: 0.24%

***Post-Harvest CBD:** 14.1%, THCa: 0.46%

Aroma: A strong smell of lady perfume and California Redwood trees

Flavors: A sugary and sweet combination of fermented grapes in a cedar wood wine barrel

Appearance: Deep, dark purple buds with dark green fan leaves and a stout structure

Backstory of Strain: These seeds are designed for smokable flower production in Equatorial regions.

Size & Style: Short and stout. Plant that does not need trellis or staking

FEMINIZED: YES

GERMINATION RATE: 90%

TIME TO HARVEST: Auto

Biscotti Pippen

CANNABINOIDS	THCa:	RATIO	FORM
26-31%	25-30%	1:35	SEED

AVAILABILITY

Seed

Parent Strains: Gushers Biscotti x Gushers Biscotti

Cannabinoid Profile: THCa Indica-Dominant Hybrid

Potential CBD:THC Ratio: 1:35

***Post-Harvest CBD:** 1%, THC: 25-35%

Aroma: It has a super sweet fruity berry flavor with hints of skunky citrus and earthy pine on exhale. The aroma is heavy and pungent, with a spicy gas overtone that's accented by fresh ripe berries and sweet fruits

Flavors: Drinking a fresh berry mojito on an apple orchard.

Appearance: It has thick spade-shaped dense olive green nugs with thin orange hairs and a coating of frosty milky amber crystal trichomes.

Backstory of Strain: This is a recumbent IBL of Gushers Biscotti. This S1 was created to stabilize the traits from these two iconic varieties.

Size & Style: Large bud structure, can grow up to 80 inches

FEMINIZED: YES

GERMINATION RATE: 99%

TIME TO HARVEST: 9 weeks

AUTO MAGICK

CANNABINOIDS	THCa:	RATIO	FORM
8-10%	LESS THAN 0.3%	20:1	SEED

AVAILABILITY

Parent Strains: Auto Magik x Auto Magik

Cannabinoid Profile: CBD Dominant Auto Flower

Potential CBD:THC Ratio: 20-25:1

CBD Content: 8%-10%

Aroma: Skunky yet fruity, high in myrcene and pinene.

Flavors: A surprisingly gasoline dominant flavor with a sweet fruit aftertone.

Appearance: Green and purple phenotypes with large expansive flowers.

Backstory of Strain: Our pick for terpene extraction, great for smoking raw and designed optimal yield in a 80 day cycle.

Size & Style: A mature plant can hit 3 1/2 feet tall and 3 ft wide with dense colas. This cultivar has several phenotypes.

FEMINIZED: YES

GERMINATION RATE: 90%

TIME TO HARVEST: Auto

CHERRY SUNRISE

CANNABINOIDS	THCa:	RATIO	FORM
9-16%	LESS THAN .49 %	31:1	SEED

AVAILABILITY

Seed

Parent Strains: Early Bird S3 x Original Cherry S3

Cannabinoid Profile: CBD-Dominant Hybrid

Potential CBD:THC Ratio: 31:1

*Pre-Harvest CBD: 9.2%, THC: 0.2%

*Post-Harvest CBD: 15.1%, THC: 0.49%

Aroma: Sweet pine and cherry citrus with a smokey salmon edge.

Flavors: An earthy sweetness of molasses and maraschino cherries mixed with a smokey and dark roast.

Appearance: Dark green bud structure with a yellow and black fade at the end of the flower cycle. A large yielder and vigorous plant that's easy to grow.

Backstory of Strain: This plant was created to give people an easy to grow/maintain cultivar that has tremendous vigor & great yield potential. With lineage from CO & OR, this cultivar grows well in many climates.

Size & Style: A fast growing hybrid that demands space and attention. She can be 8+ feet at full maturity. She has large fan leaves & uniform characteristics ideal for outdoor or greenhouse.

FEMINIZED: YES

GERMINATION RATE: 99%

TIME TO HARVEST: 9 weeks

CBGAMBIT

CANNABINOIDS	THCa:	RATIO	FORM
8-15%	LESS THAN .1%	36:1	SEED

AVAILABILITY

Seed

Parent Strains: Cannaropa Spain CBG x Unknown CBG Clone S1

Cannabinoid Profile: CBG Dominant Hybrid

Potential CBG: THCa Ratio: 36:1

*Pre-Harvest CBG: 8.3%, THCa: .07%

*Post-Harvest CBG: 14.7%, THCa: 0.1%

Aroma: A mild blend of freshly harvested microgreens with an array of plant matter, black pepper, and pine nuts.

Flavors: A moderate terpene content variety that offers a smooth and satisfying earthy tone.

Appearance: Cloudy trichomes that looks like a spoiled vanilla milkshake that has a dense bud structure to produce fine quality flowers for smokable and CBG extracts.

Backstory of Strain: A unique CBG variety that has great vigor, resistance to mites, and some terpene expression. Levels of CBDa and CBCa will also appear in minor levels for certain phenotypes.

Size & Style: A vigorous and fast growing plant with 5 point fan leaves and medium intermodal spacing. She grows more vertical than horizontal, but has great uniformity.

FEMINIZED: YES

GERMINATION RATE: 90%

TIME TO HARVEST: 9 Weeks

FIBER & GRAIN
GENETICS

Indigo

Multi-Purpose CBD/Grain/Seed/Fiber

FIBER TONS. PER ACRE	HEIGHT	GRAIN
2.96	6ft	1891 lbs/acre

AVAILABILITY

Seed

Purpose: CBD/Grain/Seed/Fiber

Potential CBD:THC Ratio: 30-1

Potential CBD: ~3.5%

Description: A grain variety with a twist. Indigo has purple flowers packed with grain. Indigo has a 110 day maturity.

Key Characteristics:

- Variety Type: Open Pollinated
- CBD Average %: ~3.5% CBD
- Test Date: 2 years of data
- Female to Male (average): 60% female
- Weeks to maturity (Canada – 50 degree latitude): 105+ days
- Germination rate %: 85-95%
- Ratio of CBD to THC (variable) 30:1 CBD:THC
- Plant height (Canada – 50 degree latitude): 100-150 cm
- Growth habit (bushy/tall): med
- How close to plant: Solid Seed
- Flower period (time of flowering): 55 days after seeding
- Potential time seed to harvest: 105+ days
- Potential yield range (NDSU data 2018 – lbs/acre of grain): >2000 lb/ac in private trails

855.KIFCURE

CFX-2

Multi-Purpose CBD/Grain/Seed/Fiber

FIBER TONS. PER ACRE	HEIGHT	GRAIN
2.3	5-6ft	1949 lbs/acre

AVAILABILITY

Seed

Purpose: CBD/Grain/Seed/Fiber

Potential CBD:THC Ratio: 20:1

CBD: 2.7%

Description: CFX-2's is our most popular variety used in organic systems in Canada and the US. The consistently uniform plant structure and excellent harvestability of CFX-2 are valuable traits recognized by both breeders and growers. Organic growers are especially drawn to this variety because of the superior vigour during establishment, tall stature that provides excellent weed control, and ability of the plant to scavenge nutrients when soil fertility is limited.

Key Characteristics:

- Medium-size seed, dioecious variety
- End uses: food and CBD
- High grain yielder
- Kernel weight: 15 grams/1000 seeds
- Days to Maturity: ~105+ days
- CBD Percentage: 0.5% to 2.7%
- Soil requirements: well-drained soils of medium texture are ideal
- Plant height: 80-130 cm

855.KIFCURE

FUTURA 83

Fiber First

FIBER TONS. PER ACRE	HEIGHT	GRAIN
5.5	12ft	900 lbs/acre

AVAILABILITY

Seed

Purpose: Fiber

Description: A new variety introduced in 2021, Futura 83 has a late-flowering cycle that makes it ideal for biomass production. The plant finds its home in southern latitudes where higher levels of humidity are found. Futura 83 brings heavy fiber yields with long straight stalks reaching between 8-12 ft. tall.

Key Characteristics:

- Medium-size seed, Monoecious variety
- End uses: Fiber based products
- High fiber yielder
- Days to Maturity: 110-118 days
- Seed Yield: 700-900 lbs/acre
- Fiber Content: 31 - 35%
- Biomass Yield: 4.5 - 5.5 tons/acre
- Plant height: 251cm-350cm

KIFCURE.COM
855.KIFCURE

Earlina 8FC

Grain First

FIBER TONS PER ACRE	HEIGHT	GRAIN
3.5	6.5 ft	1300 lbs/acre

AVAILABILITY

Seed

Purpose: Grain

Description: Earlina 8FC is bred for seed production and is one the earliest grain varieties to mature. Large yields of seed can be expected with up to 30% oil and 25% protein, along with moderate levels of CBD. Best suited for climates with lower levels of humidity and shorter growing zones.

Key Characteristics:

- Medium-size seed, Monoecious variety
- End uses: Fiber based products
- High grain yielder
- Days to Maturity: 115-120 days
- Seed Yield: 1000 - 1300 lbs/acre
- Fiber Content: 23 - 26%
- Biomass Yield: 2.5 - 3.5 tons/acre
- Plant height: 152cm-198cm

KIFCURE.COM
855.KIFCURE

Fedora 17

Dual Fiber and Grain

FIBER TONS PER ACRE	HEIGHT	GRAIN
4.5	8.25 ft	900 lbs/acre

AVAILABILITY

Seed

Purpose: Fiber & Grain

Description: One of the favorites of European growers, this variety is becoming a fast favorite in America. When grown as a dual crop Féadora 17 produces impressive seed yields while maintaining fair levels of fiber content. Southern latitudes can expect only a seed harvest with above average CBD levels. Féadora 17 is able to acclimatize to different climates while maturing on the early side. Seeds contain up to 60% Omega 6 and other essential fatty acids.

Key Characteristics:

- Medium-size seed, Monoecious variety
- End uses: Fiber & Grain based products
- Days to Maturity: 129-134 days
- Seed Yield: 700 - 900 lbs/acre
- Fiber Content: 30 - 35%
- Biomass Yield: 3.5 - 4.5 tons/acre
- Plant height: 198cm-251cm
